

PROJECT CASES

Own factory with 30 years of professional R&D experience

Customized product design, specializing in large transformers

Tier2 transformer

Protecting the security of the electricity

JINXING

ZHENGZHOU JINXING ELECTRIC CO LTD.

CASES 1

customization service

Low loss & high efficiency

Tropical-climate resistant

Built for heavy continuous duty

The problem solved in this case :

We have customized a 11kV oil-immersed transformer for him, precisely tailored to meet the demands of high-load continuous production. The reinforced tank structure and sealing design ensure long-term reliable operation in tropical marine climates. Since its commissioning, this equipment has become the core power supply for critical production lines, contributing to the group's enhanced production capacity and market competitiveness.

Transformer
S11-3000kVA-11/0.415kV

CASES 2

customization service

Modular & fast installation

IEC + local compliance

High automation & reliable supply

The problem solved in this case :

Facing the urgent needs of Bangladesh grid upgrade and regional power supply stability, we have successfully delivered a modular-designed 33kV outdoor substation. Overcoming challenges related to on-site conditions and compliance with standards, we provided a customized design that meets both IEC and local specifications.

The substation features a high degree of automation and remote monitoring capabilities, significantly enhancing the region's power supply reliability and electricity quality.

Transformer
S11-10/12.5MVA-33/11KV

CASES 3

customization service

High partial-load efficiency

Heat & sand resistant

Wide deployment, energy-saving

The problem solved in this case :

In response to Tajikistan's extensive needs for the renovation and construction of urban and rural power distribution networks, efficiency under partial loads has been optimized to align with the characteristics of local actual load rates, achieving a reduction in overall network operational energy consumption. The product structure is simple and robust, adapted to high-temperature environments of desert-edge areas, with low maintenance requirements. It provides stable and economical electricity, supporting economic development and the improvement of people's livelihoods.

Service process

customization service

01

Communication

We assess your site to understand grid conditions, load needs, and challenges.

02

Custom Design

We create a tailored solution with technical specs and efficiency options.

03

Production

Your order enters manufacturing with strict quality control.

04

Shipping

We handle safe packaging and logistics with full documentation.

05

After-sales tracking

We provide ongoing support, maintenance advice, and performance tracking.
